NJ FTC Java Sip

Event Description:

This training session is being offered in advance of the day-long August Workshops. It is intended to be an opportunity for teams to send one adult (software mentor or coach) and one student (lead programmer) to obtain some early training, experience and advice regarding the changes for the coming season.

The ~3 hour session will include training and use of your Android hardware in order to increase your team's comfort level with the new technology. Bring your hardware, if you have it. The ~3 hours will be well-invested, spending time with FTA's who will share all of the information and insight available.

The acronym stands for the three essential topic areas:
Set-Up (sometimes a challenge),
Interface (with new electronics), and
Programming (text or graphic).
JAVA S.I.P.s =

      Set-Up, Interface, Programming sessions.

[Pre-Register if interested in attending or
      for more information].
